

Talon Lodge & Spa
SITKA, ALASKA

SYSTEM BLUEPRINT • GUEST LIFECYCLE

One guest, start to finish.

How the whole platform fits together — from the master record a guest is born into, through every room, boat, activity, meal and massage, to the survey score and notes that travel with them into the next season.

DRAFT FOR REVIEW

FOR THE TALON TEAM & STELLA DEV

V1 • SEPTEMBER 2026

15 SCREENS • WORKING PROTOTYPES

This document walks the entire guest lifecycle in the order it actually happens, one stage at a time. Every stage shows the **business rules** that govern it, whether the screen is **admin-facing** or **guest-facing**, how it **maps to the database**, and a screenshot of the working prototype so there's no guessing what "done" looks like.

It has two audiences. For the **Talon team**, it's the place to confirm the rules match how the lodge really runs — mark anything that's wrong and we'll change it. For **Stella's developers**, it's the guide to what each screen does and the schema it writes to. Everything pictured is a real, clickable prototype; the closing section is honest about what's fully built versus what still needs the backend.

THE ONE IDEA EVERYTHING ELSE HANGS ON

Everything funnels to the individual guest. The group is only how people book — every assignment, order, catch, score and note attaches to the one person, and accumulates across every visit, forever.

HOW TO READ EACH STAGE

Admin-facing

A screen the lodge team uses — setup, assignments, operations, reporting.

Guest-facing

A screen the guest sees — their portal, profile, requests and survey.

Business rule

A rule the lodge runs on. These are the lines to check and edit.

Maps to schema

The database tables the screen reads and writes, for the dev team.

APPENDIX • FOR THE DEV TEAM

PHASE A

Foundation

Before a single booking, two things must exist: one clean record per human being, and a catalog of everything the lodge can offer. The whole platform is built on these two.

01 The person record — the spine

People arrive through three different doors, but the system keeps exactly **one master record per human**. Every arrival is matched against who's already known; certain matches fold in, new people get a fresh record, and uncertain cases wait for a human. From then on, a person's whole history lives on that single record.

ADMIN • BACK OFFICE

BUSINESS RULES

- One **master Person** per human — history only ever accumulates, it is never overwritten.
- Three intake doors all run the **same matching engine**: the website contact form, a reservation booking, and the guest list.
- **Tiered matching**: Tier 1 — exact email → auto-link · Tier 2 — phone + nickname-equivalent name (Bob = Robert) → auto-link · Tier 3 — name only, no contact → **waits in a review queue** for a human.
- A **role** (lead / member) lives on a person's membership in a group, **not** on the person — so a past guest can become a lead later and the record shows both.
- A **booking agent** or shared inbox is stored on the group, and is **never** merged into a guest's person record.
- Nothing is ever hard-deleted (soft-delete only), and **every merge is reversible** — the losing and surviving records are snapshotted so a merge can be undone precisely.

Intake rows (`inquiries` , `leads` , `reservation_requests` , `guest_list_entries`) each keep their raw data plus a `person_id` . The matcher resolves to one `persons` row with child `person_emails` · `person_phones` · `person_name_aliases` . Merges are logged in `merge_history` (undo-safe); unresolved Tier-3 cases sit in `merge_review_queue` .

One person. One record. Every visit, forever.

People arrive through **three different doors**, but the system keeps exactly **one master record per human being**. Every arrival is matched against who's already known; matches fold in, new people get a fresh record, and uncertain cases go to a human. From then on, a person's whole history — every group, every trip, every role — lives on that single record. **This is the spine of the entire platform.**

How a record enters and resolves

Three intake channels → one matching engine → one master Person record.

The same `resolveGuestForCandidate()` engine runs for all three channels — a website inquiry, a booking, and every name on a guest list are matched identically. Auto-links (teal) are certain; Tier-3 (salmon, dashed) is uncertain and always waits for a human, and any merge can be undone.

The matching decision

What the engine does with each incoming candidate.

TIER	SIGNAL	ACTION	WHY
1	Exact email match (normalized)	Auto-link	Email is the strongest identity signal — same address, same person.
2	Exact phone + nickname-equivalent name (Bob = Robert)	Auto-link	Two corroborating signals; nickname table resolves “Phil / Philip”.
3	Nickname-equiv name + same last name, no email/phone	Review queue	Plausible but unproven — a human confirms before merging.
—	No matching signal	New record	A genuinely new person; a fresh master record is created.

Safety: every merge — automatic or human-confirmed — records the losing and surviving states and the exact records it re-pointed, so it can be **undone precisely**. Merges are the only action that rewrites data across records at once, so they are the only action with full reversibility.

One person, many roles over time

Role belongs to a person's membership in a group — not to the person. So a guest can become a lead, and the record shows both.

Master-record management. Three intake doors → one matching engine → one master person. The tier table on the right is the exact decision the engine makes for every incoming name.

The schema spine, for the dev team. The relationship backbone of the locked v4 database: a person becomes a master record and gathers groups, trips, per-trip profiles and day-by-day asset assignments. Every later stage in this document writes into this map.

02 The offerings — every asset

Rooms, activities, boats, guides, breakfast and beverages are all the same kind of thing: an **asset** with a type and a bag of properties. Setting them up once here is what lets every later screen assign them to guests. This is also the schema trick that lets the lodge add a new offering without a database migration.

ADMIN • SETUP

BUSINESS RULES

- Every offering is an **asset** of a type — Room, Activity, Boat, Guide, Captain, Deckhand, Breakfast, Beverage — with a JSON **properties** bag (description, photos, capacity, price...).
- **Guides link to activities; captains and deckhands crew the boats** — those relationships are stored as asset-to-asset links.
- Breakfast is offered as **4–5 options per morning**; beverages are sold **by the 6-pack** and stocked onto boats.
- A package bundles assets (rooms + activities) as **package assets**, which is what drives availability and pricing later.
- New field or new asset type? It's **defined as data**, so it appears everywhere without a code change.

MAPS TO SCHEMA

One **assets** table (`asset_type` + `properties` JSON) covers every offering; crew and guides attach via **asset_links**. Packages point at assets through **package_assets**. All type-specific fields are governed by **field_definitions** (the meta-schema) — no migration to add a room amenity or a new tour.

talón • asset catalog

Assets — rooms, activities, boats & crew, breakfast, beverages

Every offering is an **asset** of a type, with a JSON properties bag (description, photos, capacity...). Guides link to activities; captains & deckhands crew the boats. Scroll, and try the breakfast planner and the boat beverage order below. (Photos are placeholders — real hotlinked photos/Matterport plug into properties.)

Boats & crew ASSET_TYPE: BOAT captain + deckhand linked via asset_links

The asset catalog. Rooms, activities, and boats-with-crew shown as typed assets. Breakfast and beverage offerings live in the same catalog, further down.

Booking & pre-arrival

A booking turns a person into a booked guest, gathers their travelling party, and hands each of them a portal to get ready for the trip.

03 Booking & the guest list

The person who books becomes the **group lead**. After the reservation is confirmed, the system asks the lead for their guest list; each traveller is matched to the master database and gets their own portal invite. From that moment the lodge can see, per guest, exactly how ready they are for the trip.

[ADMIN • ROSTER](#)[GUEST • GUEST LIST](#)

BUSINESS RULES

- The **booker becomes the group lead**; a scheduled post-confirmation message requests the full guest list.
- Each named traveller is **matched to the master record** (Stage 1) and linked to the group as a member, with their own portal invite.
- **Availability** for a package = the rooms selected × their max occupancy; publishing is guarded so a package can't go live oversold.
- A **repeat-guest badge** (R2, R3, R4...) surfaces returning guests at a glance, clickable through to their prior years.
- **Pre-trip readiness** is tracked across seven dimensions — profile, address, sizing, emergency contact, health, airfare, fishing licence — so the team can chase exactly what's missing.

MAPS TO SCHEMA

A **group** is created with the lead on `group_persons.role = lead` ; each guest becomes a `member` row. The booking is the **trip** (Group ↔ Trip is 1:1). Readiness is computed from each guest's **trip_profiles** completeness. Returning-guest counts come straight off the person's history across all trips.

Package Guest List

Every guest booked on a package, across all groups — with a repeat-guest badge (**R4** = four stays; click it for the years) and a **pre-trip readiness** bar showing how far each guest has got with their profile, airfare, fishing licence and the rest. Click any bar for the breakdown; click a chip to chase just that group.

The package guest list. Every booked guest across all groups, with repeat-guest badges and a per-guest readiness bar. The top strip rolls the whole package up — here, 64% ready, with airfare and licence the biggest gaps.

The guest portal & profile

Between booking and arrival, the guest does their own preparation in a portal built for them — not the admin app. They complete a profile for **this** trip: personal details, dietary needs, emergency contact, flights, and their fishing licence. Anything they request is reviewed by the lodge within 24 hours.

● GUEST • SELF-SERVICE

● ADMIN • REVIEWS REQUESTS

BUSINESS RULES

- The profile exists **per trip** and is **copied forward** from the guest's last visit — people change (boot size, diet, medical), so each trip snapshots its own, preserving history.
- The guest captures dietary needs, allergies, emergency contact, flights in & out, and uploads their **Alaska fishing licence**.
- Every activity or spa request the guest makes is **reviewed within 24 hours** before it's confirmed (Stage 6).
- The portal is deliberately its own experience — **no admin sidebar**, luxury tone, real photography, no emoji.

MAPS TO SCHEMA

Writes a **trip_profiles** row (structured core fields + a **details** JSON governed by **field_definitions**), versioned and copied from the prior trip. The licence and photos become **stay_media**. Requests are written as pending **assignments** awaiting approval.

PHASE C

Assignment

With the party known and the offerings set, the lodge places each individual guest — into a room, onto activities and the spa, and onto a boat. Every placement is per person, and every placement flows into the daily run sheet.

05

Rooms

The reservation assigns the room(s) to the group; here the team places **each individual guest** into one of them. Over-capacity is accepted and flagged, never blocked — the lodge always knows better than the software. Every placement attaches to the guest, so it flows straight to the rooming list and the daily report.

ADMIN • LODGING

BUSINESS RULES

- Each **individual guest** is placed into a specific room — not just the group into a building.
- Over-capacity is **accepted and flagged**, never blocked.
- Staff can move anyone to any room lodge-wide from one board (24 guests / 24 beds when the lodge is full).
- The assignment attaches to the guest, so it appears on the rooming list and the daily run sheet automatically.

MAPS TO SCHEMA

A per-person **assignment** of a Room asset to the guest for the trip. The room-level occupancy view is derived; the source of truth is one row per guest.

OPERATE • LODGING

Room Assignments

The reservation assigns the **room(s) to the group**. Here you place each **individual guest** into one of the group's rooms. Over-capacity is accepted and flagged (never blocked). Every assignment attaches to the guest, so it flows to the daily report and rooming list.

Room assignments, lodge-wide. Every guest placed by name, tagged with their group, with a move-anyone dropdown per person and live occupancy on each room.

Every activity and spa request — whether it came from the reservation or from the guest's own portal — lands in **one approval queue** on a 24-hour clock. Approving confirms it and the guest sees it as scheduled. Massage is booked per person, with a therapist, treatment and time for each appointment.

ADMIN • CONCIERGE

BUSINESS RULES

- Requests from **both** the reservation flow and the guest portal land in a single queue, each on a **24-hour review clock**.
- Approving sets the request to **confirmed**; the guest immediately sees it as "scheduled" in their portal.
- **Massage is per person** — each appointment carries its own guest, therapist, treatment and time.
- Activities carry a guide (or pilot + vendor for fly-outs) and cap party size; the specific guide and boat are set on the scheduling calendar.

MAPS TO SCHEMA

Each request is an **assignment** (person + asset + trip + date) with a status; approval flips it to confirmed. Massage detail — therapist, treatment, time — lives in the assignment's `details` JSON, so the daily report and portal both read it. The SLA clock is tracked server-side.

talón • activity approvals

Activity approvals

Every activity & spa request — from the reservation flow and the guest portal — lands here for review. Approve to confirm it, or decline. Each request carries a **24-hour review clock**.

Approving sets the request to **confirmed** and the guest sees it as **Scheduled** in their portal. Assigning the specific guide & boat happens on the Scheduling calendar. In production this queue also sends the admin notification and tracks the SLA server-side.

The approval queue. Activity and spa requests grouped by party, each with a 24-hour clock. Note the massage request expands to a per-guest appointment with its own therapist and treatment.

Guests are seated on boats for their sportfishing — pick the day, then a group, then a boat. Each boat seats up to its set capacity, groups can share, and a guest keeps a "home boat" for the trip that can be switched for any single day. The key rule: on a day a guest has an adventure booked, that **activity wins** and they come off the boat.

ADMIN • DOCK

BUSINESS RULES

- Seat guests by **day** → **group** → **boat**; each boat seats up to its **set capacity** (6, 4 or 2, from the crew setup).
- Groups can **share a boat**, and if a group doesn't fully fit you choose who goes on it and place the rest elsewhere.
- A guest has a **home boat** for the trip; a per-day switch overrides it for one day only.
- **Activity-priority rule**: any day a guest has a scheduled adventure, that activity takes priority and they **drop off the boat** for the day.

MAPS TO SCHEMA

Boat seating is a per-person **assignment** of a Boat asset, keyed by trip and date (home seating with per-day overrides). Captain and deckhand come from the boat's **asset_links**. The activity-priority rule is resolved at read time against the day's confirmed adventures.

talon • boat assignments

Boat assignments

Assign guests to boats for their sportfishing — **pick the package date, then a group, then a boat.** Each boat seats up to its **set capacity** (from Team — a boat may be 6, 4 or 2); groups can share a boat, and if a group doesn't fully fit you choose which guests go on it and place the rest elsewhere. Any day a group has a scheduled activity, that activity takes priority and those guests drop off the boat for the day.

SWITCH BOATS BY DAY Gaines · pick a different boat for any day; "· home" is their default

Seat this group on a boat in **step 3** first, then switch any guest to another boat by day here

Boat assignments. Pick the date, then a group, then seat guests on a boat. Every boat shows its crew and open seats; the whole fleet is visible at once.

On-property

While guests are at the lodge, operations run day to day: what everyone eats, what they catch and take home, and a single run sheet that puts every person in the right place each morning.

08 Breakfast & beverages

Each night, the lodge takes the next morning's breakfast and the day's beverage order — **per guest**. Breakfast is free choice from that day's menu; beverages roll onto the boat-stocking list by whichever boat the guest is on that day. It produces two outputs: a kitchen sheet and a boat-stocking list.

ADMIN • KITCHEN & DOCK

GUEST • CAN PRE-SET

BUSINESS RULES

- Orders are captured **per guest, per night**, for the following morning.
- Breakfast is **free choice** from that day's menu (mains + add-ons/mods).
- Beverages are ordered by the 6-pack and **roll onto the boat-stocking list** for the boat that guest is on that day.
- Two outputs come from the same order: a **kitchen sheet** (by guest) and a **boat-stocking list** (by boat).

MAPS TO SCHEMA

Each order is an **assignment** per guest per day, with the picks in `details` JSON. The menu and beverage catalogs are Breakfast and Beverage **assets**. Boat-stocking is derived by joining orders to the day's boat seating.

talon • meal & beverage orders

Meal & Beverage Orders

Each night, take the next morning's **breakfast** and the day's **beverage** order — **per guest**. Night 1 → Day 1 (first activity day). Breakfast is free choice from that day's menu; beverages roll onto the **boat-stocking list** by whichever boat the guest is on that day.

Meal & beverage orders. Per guest, per night: breakfast from the day's menu on the left, the beverage order on the right — which then loads onto that guest's boat.

Fish processing

At the end of each fishing day, the group's catch is logged once. The engine yields filet weight per species (count × average weight × recovery %), totals the day, and splits it into however many take-home shares the group wants — **one named guest per share**. Each share's poundage lands on that guest's own record, so it rolls up per individual for the trip.

ADMIN • PROCESSING

BUSINESS RULES

- Catch is logged **per group, per fishing day**, by species.
- Filet yield = **count × average weight × recovery %**, summed to a day total in pounds of filet.
- The day's filet is split into N **take-home shares**, each assigned to **one named guest**.
- Each share's poundage **attaches to that guest's record** — the catch funnels to the individual, just like every other assignment.
- Per guest: how the fish goes home (carry-on / ship), whether they keep collars & bellies, and who pays.

MAPS TO SCHEMA

fish_catch (trip, group, date, species, count, avg_weight, recovery) → **fish_catch_split** (share_index, person_id, lbs) → **fish_payment** (payer, method). Every share row references a person; **no card number is ever stored**, only a payment-method reference.

talon • fish processing

Fish Processing

At the end of each fishing day, log the group's catch once. The engine yields the filet weight per species (count x avg weight x recovery%), totals the day, and splits it into however many take-home shares the group wants — **one named guest per share**. Each share's poundage lands on that guest's own record, so it rolls up per individual for the trip.

SPECIAL INSTRUCTIONS

e.g. vacuum-pack halibut separately; ship Barrett's share to hotel

TAKE-HOME, SMOKING & PAYMENT · whole trip

How each guest gets their fish home, whether they keep the collars & bellies, and who's paying. Set once for the trip — the group lead can also fill this in from their portal.

GUEST	TAKE HOME AS	KEEP COLLARS & BELLIES?	NOTE
Chris Marshall	Carry-on — airport on departure day	No	optional
Chuck Roesel	Carry-on — airport on departure day	No	optional
Gwen Younger	Carry-on — airport on departure day	No	optional
Kathy Marshall	Carry-on — airport on departure day	No	optional

Fish processing. The day's catch yields 189.9 lb of filet, split into six equal shares of 31.65 lb — each tied to a named guest, so it lands on their record for the trip.

The daily run sheet

Everything above comes together here: the dock-and-spa run sheet for a single day, **every assignment by individual guest**. Boats list their captain, deckhand and seated guests; the spa lists each appointment by time; adventures list each guide's guests; and anyone not on the water is accounted for. This one sheet is why every stage insists on attaching to the person.

ADMIN • DAILY OPS

BUSINESS RULES

- The sheet is entirely **by individual** — boats name each seated guest under their crew; the spa names each guest by time; adventures name each guide's guests.
- A guest booked on an adventure is **pulled off the boat** for that day (the activity-priority rule from Stage 7, made visible).
- An **evening** massage keeps a guest on the water that day; a day-spa booking takes them off it.
- Everyone present but not on a boat or activity is listed under **"Enjoying the Island,"** grouped by party — nobody is unaccounted for.
- The sheet pulls live from boat assignments and approvals, and prints for the dock.

MAPS TO SCHEMA

Pure read model: it joins the day's **assignments** (boats, activities, spa) with the trip roster from **trip_profiles**, applies the activity-priority rule, and groups the remainder. No new tables — it's the payoff of the individual-first design.

talón • daily boat & activity report

Daily boat & activity report

The dock-and-spa run sheet for a single day — **every assignment by individual guest**. Boats list their captain, deckhand and seated guests; massage lists each appointment by time with therapist & treatment; adventures list each guide's guests. A guest booked on an adventure is **pulled off the boat** for that day (the activity takes priority). Pulls live from Boat Assignments & Approvals.

The daily run sheet. One day, every guest placed. Two anglers are off the Retriever because they're on the float plane; a guest with an evening massage stays on her boat; everyone else is on the island — all resolved automatically.

PHASE E

Post-stay

A day after the guest checks out, the loop closes: a survey goes out, the answers become a score and a set of notes, and both attach back to the individual record — ready for the next visit.

11 The satisfaction survey

One day after checkout, each guest is automatically sent a pre-identified survey — short, on one standardized scale, grouped by department. If a rating is average or poor, it quietly asks how the lodge could do better. And if the guest is planning a return, it invites them to look at next year's calendar with a standing discount.

■ GUEST • POST-STAY

BUSINESS RULES

- Sent automatically **one day after checkout**, pre-identified to the guest (no "who are you?" step).
- Ratings are standardized to **one 4-point scale** (Excellent / Good / Average / Poor), grouped by department.
- Any **Average or Poor** rating reveals a "Tell us — how can we do better?" field, captured for service recovery.
- Answering that they're planning a future stay reveals a **rebook prompt** to review next-year availability.
- **Business rule:** a 10% discount is automatic for reservations made within **15 days** of departure — and the survey lands inside that window.

MAPS TO SCHEMA

A survey response is another record type pointing at the guest's **person** (like an inquiry or a booking). Answers and write-ins are stored per question; the response feeds Stage 12's scoring.

TOMMY FLORIO • MAY 24-28, 2027

How was your stay?

Thank you for spending your week with us. A few questions — about three minutes — and every answer goes straight to the team that can act on it.

Submit

The guest survey. Pre-identified, one scale, grouped by department. Average/poor answers open a "how can we do better?" field; a return-visit answer opens the rebook prompt with the standing 10% offer.

12 Scoring & analysis

Every response becomes a number. Each rating maps to points, questions roll up into department scores, and the departments average into one guest satisfaction score from 0–100. Low answers flag the department for follow-up now; a monthly rollup goes to each department. Recommend and rebook are tracked separately as advocacy, not folded into the score.

ADMIN • REPORTS

BUSINESS RULES

- Each rating → points: Excellent 100 · Good 75 · Average 40 · Poor 0.
- Questions roll up into departments — **Service, Facilities, Culinary, Guiding, Spa** — and the answered departments average into the **0–100 guest score**.
- Bands: 90–100 Exceptional · 75–89 Strong · 60–74 Watch · under 60 At-risk (auto-flags follow-up).
- Any Average/Poor answer raises a **service-recovery flag** routed to that department.
- **Recommend** and **rebook** are tracked separately as advocacy/retention, never inside the score.
- Each department receives a **monthly analysis** of its own scores and comments.

MAPS TO SCHEMA

Scores are computed from the response and written to **survey_scores**, linked to the person and the trip. Department rollups and top-box percentages are derived; the latest and average score also cache onto the person for quick history.

Season satisfaction dashboard

Every guest is surveyed one day after checkout. Answers are scored, linked to the guest, and rolled up by department. This is the 2027 season to date.

By department score 0-100 • top-box = share rating Excellent / Exceeded

Every question

7 questions • sorted by score

Service recovery

Any Average / Poor / Failed answer is flagged to its department for follow-up — this is where the survey earns its keep.

- Lunch — 5 guests rated Average** (CULINARY)
Routed to Culinary • follow up recommended
- Lodge & accommodations — 1 guest rated Failed** (FACILITIES)
Routed to Facilities • follow up recommended
- Fishing guides & service — 1 guest rated Average** (GUIDING)

What guests said

31 of 44 left written comments (Q11). Illustrative excerpts — the live feed routes each to management and the named department.

"Dinners were the highlight — Chef outdid himself every night."

PRAISE Culinary

"Guides put us on fish all week. Best fishing trip of our lives."

PRAISE Guiding

"Lunch on the boat felt a step below the rest — worth a look."

WATCH Culinary

"The massage pavilion at sunset was unforgettable."

PRAISE Spa

How collection works

Automated — no one has to remember to send it

1

2

3

4

5

The analysis dashboard. A season's responses rolled into an overall score, department cards, per-question breakdowns and a service-recovery panel — the monthly view each department receives.

13 It travels with the guest

The loop closes back to Stage 1. On the guest's staff-only profile, the score is published with a plain breakdown of how it was built — and, more importantly, their survey comments become **carry-forward notes the lodge acts on in future years**. A comment can catch what a score hides: a breakfast rated "excellent" whose note mentions a 30-minute wait becomes a flag for next season.

● ADMIN • STAFF-ONLY PROFILE

BUSINESS RULES

- The score is published on the guest's profile for **staff eyes only** — never shown to the guest.
- The profile shows **how the score was built** (answer → points → department → score), so it's transparent to management.
- Survey comments become **carry-forward notes**, tagged **Fix** or **Delight**, routed to a department and dated to the year.
- Notes catch what the number hides — an "Excellent" breakfast whose comment flags a long wait still raises a Fix note.
- Each note carries **Carry-to-next-stay / Mark-addressed**, and a year-over-year comment history shows the whole relationship.

MAPS TO SCHEMA

The score reads from **survey_scores**; the carry-forward notes are person-linked records with a tag, department, source year and status. Because they hang off the **person**, they resurface automatically the next time that guest books — the accumulation promised in Stage 1.

talón • guest profile – satisfaction (staff only)

Internal — staff only. Satisfaction scores and survey notes are never shown to the guest.

Act on next visit

Carried forward from his survey comments

FIX Culinary / Kitchen

2027 · Breakfast

Waited 30+ minutes for breakfast (biscuits & gravy). The food was great — it was the wait.

He rated breakfast Excellent anyway, so the score hides it — but a returning guest will notice if it repeats. Flag the kitchen to expedite his table.

CARRY TO NEXT STAY

MARK ADDRESSED

DELIGHT Culinary / Kitchen

2027 · Lunch

Would like hot soup and the saltwater-boat sandwiches on his river-fishing days.

A specific, easy request. Pre-stock it for his river days next season and it becomes a delight, not a complaint.

CARRY TO NEXT STAY

MARK ADDRESSED

Survey history

Every survey appends here, year over year

2027 season Aug 22–26 · Bluff House

79 · Strong

PRAISE Incredible hospitality.

Overall

NOTE We have been guests before and know what to expect.

Lodge & accommodations

ACTION We had to wait over 30 minutes to be served biscuits and gravy. The meal was great.

Breakfast

ACTION Can we request hot soup and the sandwiches that saltwater boats receive when river fishing? Great cookies.

Lunch

NOTE We knew what to expect. Great people.

Fishing guides & service

2026 season illustrative — history accrues each year

NOTE Prior years' surveys will appear here, so the team sees the whole relationship at a glance.

The guest's satisfaction profile. Staff-only. The score and how it's built, plus the "act on next visit" notes drawn from the guest's own comments — the memory the lodge brings to the returning guest.

WHERE THE BUILD ACTUALLY STANDS

What's ready, and what needs the backend

Every screen in this document is a working prototype. What separates a convincing prototype from a live production system is the system-of-record backbone — and that split is honest below.

● Built & demonstrable

FRONT-END • LOGIC • PROTOTYPES

- Every screen shown here, end to end
- The scoring, availability, yield and rollup logic (real math)
- The matching & merge engine, validated on real data
- The guest portal home & profile in the production app
- The design system — tokens, brand, no-emoji luxury tone

● Built, awaits wiring

FRONT-END DONE • NEEDS THE API

- Persisting profiles, assignments, orders & scores
- Publishing survey scores to the live guest record
- Turning prototype boards into API-backed screens
- The locked v4 database schema (migrations authored)

● Stella / backend

BY DESIGN • NOT OURS TO BUILD

- Authentication, sessions & access control
- The survey scheduler (checkout + 1 day)

- Outbound email & the 24-hour SLA clock
- Payments (fish shipping & balances)
- Server config, environments & deploy

APPENDIX

API contract

A proposed contract for the endpoints each screen needs and the shapes they exchange — for Stella's team to ratify against the locked v4 schema. Grouped to match the stages above; representative payloads shown, not every field.

BASE	<code>/api/v1</code> · JSON in and out.
AUTH	Staff calls send a Bearer session (RBAC); <code>/portal/*</code> uses the guest's magic-link session. Auth is Stella's — this contract assumes it.
IDS	Every entity has a ULID <code>id</code> . Servers stamp <code>created_by</code> / <code>updated_by</code> + timestamps.
DELETES	Soft-delete only (<code>active:false</code>) — no endpoint hard-deletes.
LISTS	<code>{ data:[...], meta:{ total, page, per_page } }</code> . Errors: <code>{ error:{ code, message, fields? } }</code> .
MONEY	No card number is ever sent or stored — only a <code>payment_method_id</code> reference.

1 • People & matching STAGE 01

POST `/intake/:channel`
Stage 01 · `channel = inquiry|lead|reservation|guest-list`. Runs the matcher, returns the resolved person and the tier decision.

GET

/persons/:id

The master record — emails, phones, aliases, every group/trip/role, and cached rollups.

GET

/persons?q=&page=

Search by `canonical_name` / email / phone.

GET

/merge-review

The Tier-3 queue awaiting a human decision.

POST

/merges

`{ survivor_id, loser_id }` — combine two people; snapshotted and reversible.

POST

/merges/:id/undo

Reverse the most recent not-yet-undone merge on a survivor.

POST /INTAKE/:CHANNEL → 200

```
{ "person_id": "01J...",
  "match": { "tier": 2, "action": "auto-link",    // tier 3 → "review"
             "signal": "phone + nickname (Bob=Robert)" },
  "created": false }
```

GET /PERSONS/:ID → 200

```
{ "id": "01J...", "canonical_name": "Phil Younger",
  "emails": ["phil@..."], "phones": ["480..."], "aliases": ["Philip"],
  "memberships": [ { "group_id": "...", "trip_id": "...", "role": "lead", "year": 2027 },
                    { "group_id": "...", "trip_id": "...", "role": "member", "year": 2019 } ],
  "rollups": { "total_trips": 3, "latest_survey_score": 79, "avg_survey_score": 86 } }
```

2 • Assets & catalog STAGE 02

GET

/assets?type=

Stage 02 · type = `room|activity|boat|guide|breakfast|beverage...` . Returns the `properties` JSON per asset.

POST

/assets

Create an asset of a type with its `properties` bag.

PATCH

/assets/:id

Edit an asset; `properties` is validated by its field-definitions.

POST

/asset-links

`{ from_asset_id, to_asset_id, capability }` — link a guide to an activity, a captain/deckhand to a boat.

GET

/field-definitions?target=

target = `asset|trip_profile|assignment|person`. The meta-schema that drives every form — no migration to add a field.

3 • Packages, availability & the guest list STAGE 03

GET

/packages/:id

Stage 03 · dates, nights, and its `package_assets` (rooms + activities).

GET

/packages/:id/availability

Computed capacity (Σ selected rooms $\times$ max occupancy) and remaining seats.

GET

/packages/:id/guests

Every booked guest with per-guest readiness across the seven dimensions + repeat-guest count.

POST

/trips

`{ package_id, lead:{person...} }` — the booking: creates the group + trip (1:1) and sets the lead.

POST

/trips/:id/members

`{ guests:[{name,email?}] }` — matches each to a person, links as member, issues portal invites.

GET /PACKAGES/:ID/GUESTS → 200 (ONE ROW)

```
{ "person_id":"...", "name":"Kathy Marshall", "group":"Marshall",
  "room":"Bluff House", "returning_count":2,
  "readiness": { "score":4, "of":7,
    "profile":true, "address":false, "sizing":true, "emergency":false,
    "health":true, "airfare":false, "license":true } }
```

4 • Guest portal STAGE 04 • GUEST SESSION

GET

/portal/trip

Stage 04 · the guest's current trip — dates, booking code, party, days-to-go.

GET

/portal/profile

This trip's profile (copied forward from the last visit).

PUT

/portal/profile

Autosave the profile — partial patches accepted.

POST

/portal/media

Upload fishing licence / photo → `stay_media` (multipart).

POST

/portal/requests

`{ asset_id, date, guest_ids[] }` — an activity or spa request → a pending assignment (Stage 06).

PUT /PORTAL/PROFILE — TRIP_PROFILES

```
{ "version":3,
  "core": { "first":"Tommy","last":"Florio","dob":"1979-04-12",
            "email":"...", "phone":"...", "address":"..." },
  "details": { "diet":["none"], "allergies":"",
               "emergency":{" name":"Dana Florio","phone":"...", "rel":"spouse" },
               "boot":"11", "jacket":"L" } } // details JSON governed by field_definitions
```

5 • Assignments — rooms, activities, spa, boats STAGES 05-07

POST

/assignments

Stages 05-07 · the one scheduler for everything: `{ person_id, asset_id, trip_id, date?, details }`.

PATCH

/assignments/:id

Reassign, retime, or confirm/decline.

GET

/trips/:id/rooms

Room allocation, lodge-wide, with occupancy. **Stage 05**

PUT

/trips/:id/rooms/:person_id

`{ room_asset_id }` — over-capacity returns `200` with a `flag`, never `409`.

GET

/approvals?status=pending

The activity & spa queue with SLA clock. **Stage 06**

POST

/approvals/:id/approve · /decline

Flip a request to confirmed (guest sees "scheduled") or decline it.

GET

/trips/:id/boats?date=

Seating for a day, home-boat with per-day overrides. **Stage 07**

PUT

/trips/:id/boats

`{ date, seating:{ person_id: boat_asset_id } }`.

POST /ASSIGNMENTS — THE UNIFIED SHAPE (A MESSAGE)

```
{ "person_id":"...", "asset_id":"asset_message", "trip_id":"...",
  "date":"2027-05-26", "status":"confirmed",
  "details": { "time":"4:30 PM", "therapist_id":"...",
    "treatment":"Northern Release" } }
```

// rooms/boats/activities/breakfast all use this one endpoint; details JSON differs by asset_type

6 • On-property — meals & fish STAGES 08-09

GET `/trips/:id/meals?date=`
Stage 08 · per-guest breakfast + beverage order for the morning.

PUT `/trips/:id/meals/:person_id?date=`
Set one guest's picks (an assignment with `details`).

GET `/trips/:id/meals/kitchen?date=` · `/boats?date=`
Derived kitchen sheet (by guest) and boat-stocking list (by boat).

POST `/trips/:id/catch`
Stage 09 · log the day's catch → yields filet weight per species + day total.

PUT `/trips/:id/catch/:date/splits`
`{ shares:[{ person_id }] }` — split the day's filet into named take-home shares.

POST `/trips/:id/catch/:date/payment`
`{ payer_person_id, payment_method_id }`.

POST /TRIPS/:ID/CATCH → FISH_CATCH + FISH_CATCH_SPLIT

```
{ "date":"2027-05-25", "group":"Marshall",
  "lines":[ { "species":"King Salmon","count":6,"avg_weight":17,"recovery":45 },
    { "species":"Silver Salmon","count":20,"avg_weight":7,"recovery":40 } ],
  "day_total_lbs":189.9,
  "splits":[ { "share":1,"person_id":"...chris","lbs":31.65 },
    { "share":2,"person_id":"...chuck","lbs":31.65 } ] } // 6 shares
```

7 • The daily run sheet STAGE 10 • READ MODEL

GET `/trips/:id/daily?date=` · `/properties/:id/daily?date=`

Stage 10 · pure read model. Joins the day's assignments, applies the activity-priority rule, groups the rest. No writes.

GET /DAILY?DATE= → 200

```
{ "date": "2027-05-26",
  "boats": [ { "boat": "Retriever", "captain": "James Lecrone", "deckhand": "Emily Rose",
               "guests": ["Jim Schiffer", "Lisa Schiffer"] } ], // Bob & Jeff pulled off – on the f
  "spa": [ { "time": "4:30 PM", "guest": "Kathy Marshall", "therapist": "Lori Strachan", "treatment": "Nor
  "adventures": [ { "name": "Freshwater Fishing by Float Plane", "time": "8:00 AM",
                    "guide": "Ted Deering", "guests": ["Bob Gomez", "Jeff Langhorst"] } ],
  "island": [ { "group": "Lufkin", "guests": ["Beau Reinhard", "Onni Lufkin", "..."] } ] }
```

8 · Survey, scoring & the record STAGES 11-13

GET /portal/survey/:token

Stage 11 · the pre-identified survey (guest token from the checkout+1 send).

POST /portal/survey/:token

{ answers:[...], write_ins:{...}, rebook:bool } — submit; triggers scoring.

GET /persons/:id/satisfaction

Stages 12-13 · staff-only. The score, its build breakdown, and department rollups.

GET /persons/:id/notes

Carry-forward notes drawn from survey comments.

POST /persons/:id/notes

{ tag, dept, source_year, text } — add a Fix/Delight note.

PATCH /persons/:id/notes/:noteId

Carry to next stay, or mark addressed.

GET /PERSONS/:ID/SATISFACTION → 200

Talon Lodge & Spa · System Blueprint · v1 · September 2026. A draft for review. The business rules on every stage are the lines to check against how the lodge really runs — mark anything that's wrong and it will be corrected before the dev team builds to it. Screens are working prototypes captured from the design repository; production screens live in the app under access-gated areas.
