Guest Platform — Project Review

Build status & walkthrough for the team

Prepared August 28, 2026 Repository · talon-lodge-design Status · Interactive prototypes

One platform for the whole guest lifecycle

From the first inquiry to the post-stay survey, every screen reads and writes **a single golden record per guest**. We've prototyped the full journey — sell it, prepare the guest, run the stay, bill it at checkout — plus the check-in decisions that decide **who pays for what** and **how each guest's fish gets home**.

What this review covers: what's been built, how the guest lifecycle and data model work, the new check-in / payment / fish process, the report deliverables, the production stack, and the open decisions we need to make together.

Everything shown is a **working prototype** today, running on shared browser storage — the stand-in for the one production database. The build target is **Angular + Laravel on Aurora MySQL**, across four lodge brands.

— WHAT WE'VE BUILT

The complete build inventory

The whole prototype set at a glance, so nothing gets rebuilt — reports & deliverables, the app modules by area, and the design specs.

Everything we've built — modules & reports

A map of the **whole prototype set** in talon-lodge-design so nothing gets rebuilt. Grouped by area; **reports & deliverables** carry a print PDF, **modules** are the working app screens, and **docs** are the specs. Everything listed exists today.

11

Build inventory. 9 reports/tools (each print-ready), 30 app modules across Setup → Sales → Pre-arrival → Operations → Records, plus reference tooling and 12 design-spec docs. Island Ops is flagged as a separate app.

The system reads left-to-right as one guest's journey

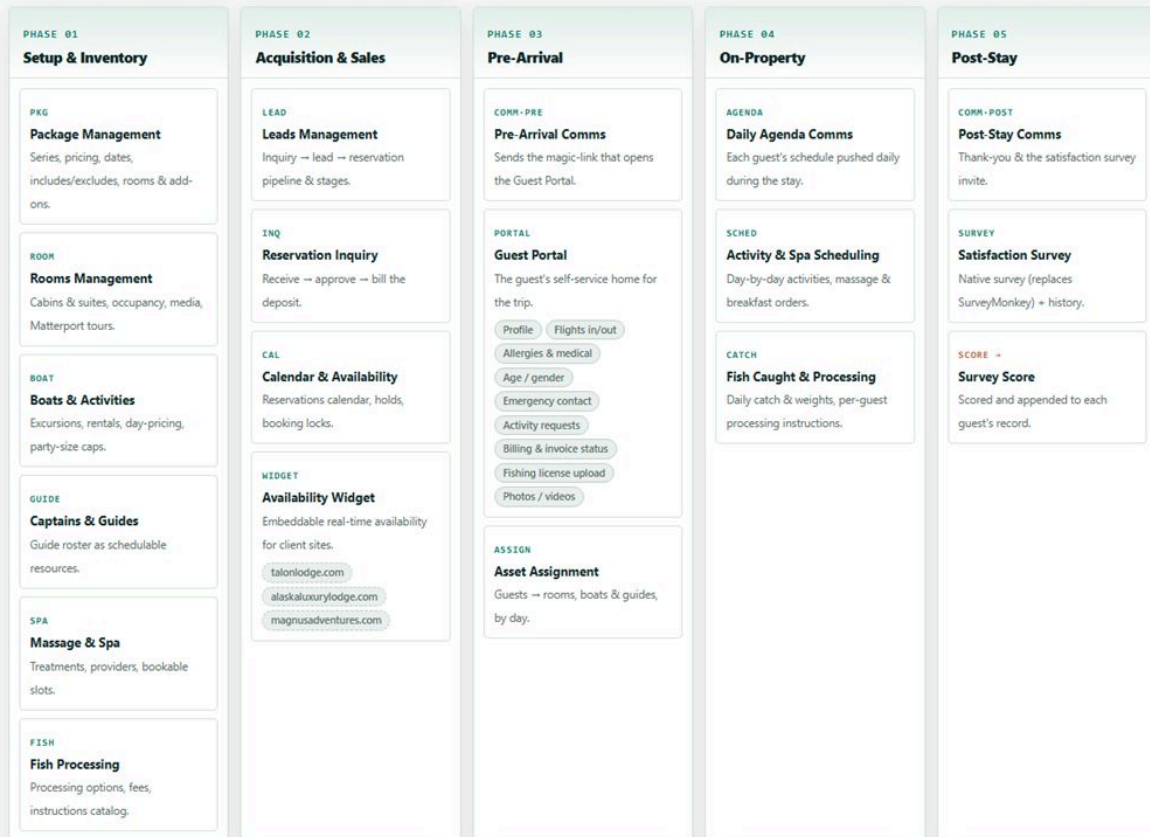

Six phases — set up the inventory, sell it, prepare the guest, run the stay, follow up, and merge the history. Each phase writes back to one People & Trip record; nothing is a silo.

Every module, arranged by the guest's journey

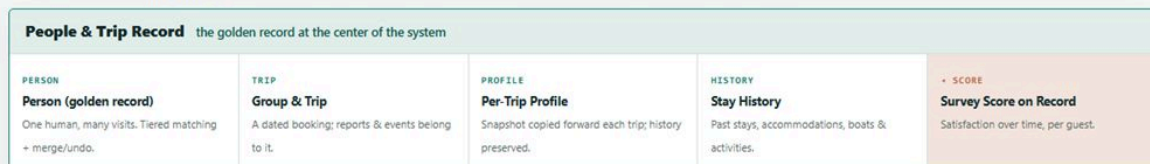

The system reads left to right as one guest lifecycle — from setting up inventory to the post-stay survey. Every phase writes to a single **People & Trip record**, and every phase stands on a shared layer of platform services. Nothing here is a silo.

Module / capability Lifecycle flow → Feeds the guest record External / embeddable

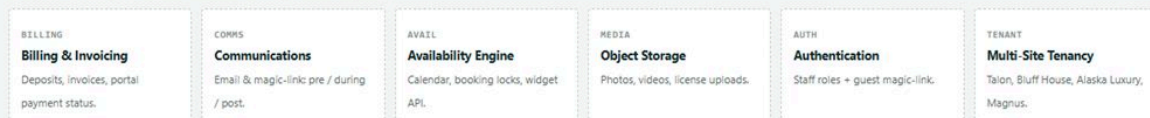

Guest lifecycle the five phases, in order — each column is one stage of a stay

The record everything writes to every phase above reads & writes here — one deduplicated person, their trips, and their history

Platform services shared foundations every module depends on

Capability map. Every module arranged by the stay phase it serves, standing on shared platform services (billing, comms, availability, storage, auth, multi-site tenancy).

Everything hangs off one person

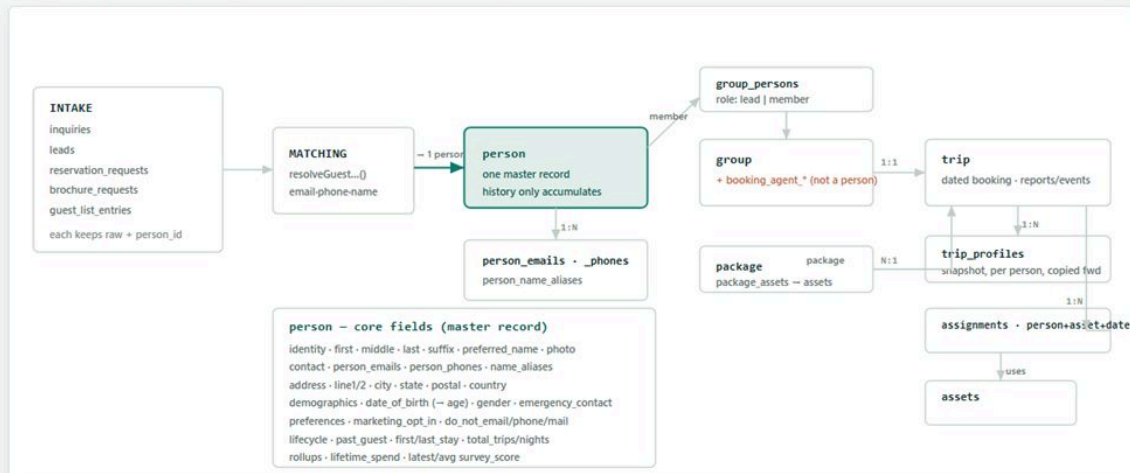

A guest is matched to a single **person** master record, then accumulates groups, trips, per-trip profiles, and day-by-day asset assignments over years of visits. History only accumulates — it's never overwritten.

TALON LODGE PLATFORM · DATA MODEL

The schema spine: everything hangs off one person

The relationship backbone of **DB_SCHEMA.md** — how a person enters, becomes a master record, and gathers groups, trips, profiles and day-by-day asset assignments over time. Full column-level tables are in the schema doc; this is the map to review it against.

— key relationship (resolve to 1 person) — foreign key (1: N) --- booking agent (not a person)

Rooms, boats, guides, massage, activities & breakfast are all **assets** (asset_type + properties JSON); anything scheduled is an **assignment** (person + asset + date + details JSON). Field sets for assets/profiles/assignments are defined as data in **field_definitions** (meta-schema, §0). Also off this spine: **survey_scores**, **merge_history**, **invoices**, **stay_media**. A booking agent's shared inbox lives on the group, never merged into a person.

The data model. Intake → matching → person → group / trip / trip-profiles / assignments / assets. Rooms, boats, guides, spa and activities are all **assets**; anything scheduled is an **assignment** (person + asset + date).

The lead decides; each guest confirms

At check-in — in the portal, or at the desk if it wasn't done before arrival — the group lead sets **who pays** for each guest's activities, spa & massage, alcohol and fish processing, and **how the fish is handled**. When a guest is made responsible, their own portal gets the tasks to confirm.

Check-in, payment & fish — who decides, where, and with what tool

Two decisions belong to the **group lead** — who pays for add-ons and how each guest's fish is handled. Each is made in the **portal**, or completed **at check-in** if it wasn't done before arrival. When the lead makes a guest responsible for a payment or for part of the fish, that guest's own portal gets the tasks to **confirm** — including a required **FedEx risk disclaimer**. This maps every step to its tool and status.

✓ HAVE built & working + BUILT NOW new in this pass ◯ EXTEND exists, needs wiring

THE FLOW

Phase 1 The lead decides

GROUP LEAD

Who pays for what

Per guest, sets the payer for **activities, spa & massage, and alcohol** — themselves, the lead, or another guest.

Tool · **Payment Responsibility** — payment-responsibility.html

✓ HAVE

IN THE PORTAL

AT CHECK-IN — IF NOT DECIDED

How fish is managed

Splits the group's catch into take-home shares by guest, and assigns who bears each share's **processing cost**.

Tool · **Fish Processing** + portal fish tile — fish-processing.html

◯ EXTEND

IN THE PORTAL

AT CHECK-IN — IF PORTAL NOT FILLED BEFORE ARRIVAL

Phase 2 The assigned guest confirms

GUEST · OWN PORTAL

Confirm payment responsibility

Sees the exact charges routed to them (their own + any the lead assigned) and a folio total, then confirms responsibility.

Tool · **Guest Confirmations** — guest-confirmations.html

+ BUILT NOW

THEIR PORTAL

FINISHED AT CHECK-IN IF NEEDED

Confirm fish handling

Chooses **take with me on the plane** or **ship via FedEx** for their share.

Tool · **Guest Confirmations**

+ BUILT NOW

THEIR PORTAL

FINISHED AT CHECK-IN IF NEEDED

FedEx risk disclaimer — read & accept

Choosing FedEx reveals the disclaimer; the guest must tick **"I have read and accept this risk"** before it can be confirmed. Talon Lodge and the processor are released from liability; acceptance (who & when) is stored on the record.

Tool · **Guest Confirmations** — gated & logged

+ BUILT NOW

THEIR PORTAL

Phase 3 It flows through to checkout & ops

SYSTEM · OPS

Charges land on the right folio

Every activity / spa / alcohol charge routes to the assigned payer; checkout shows a **folio per payer** with the total to

✓ HAVE

Process & tools map. Lead decisions → guest confirmations → checkout folios & fish processing, with each step's tool and status (built / extend).

⚠ FEDEX FISH – REQUIRED RISK DISCLAIMER

If a guest chooses to ship their catch by FedEx, they must read and accept a disclaimer before confirming: shipments can be delayed and fish can thaw, spoil or be lost — **Talon Lodge and the fish-processing company do not absorb this risk.** Acceptance (who & when) is recorded on the guest's record.

Fish handling

TO DO

How you want your catch to get home

CATCH

42 lb Coho Salmon • 2 boxes

Your take-home share of the Keller group catch

Take with me on the plane

Frozen & boxed for your flight home.

Ship via FedEx

We hand off to the processor for FedEx shipment.

⚠ FEDEX SHIPPING – PLEASE READ & ACCEPT

Shipping fish by FedEx carries real risk. Cold-chain shipments can be **delayed**, and fish can partially **thaw, spoil, or be lost or damaged** in transit.

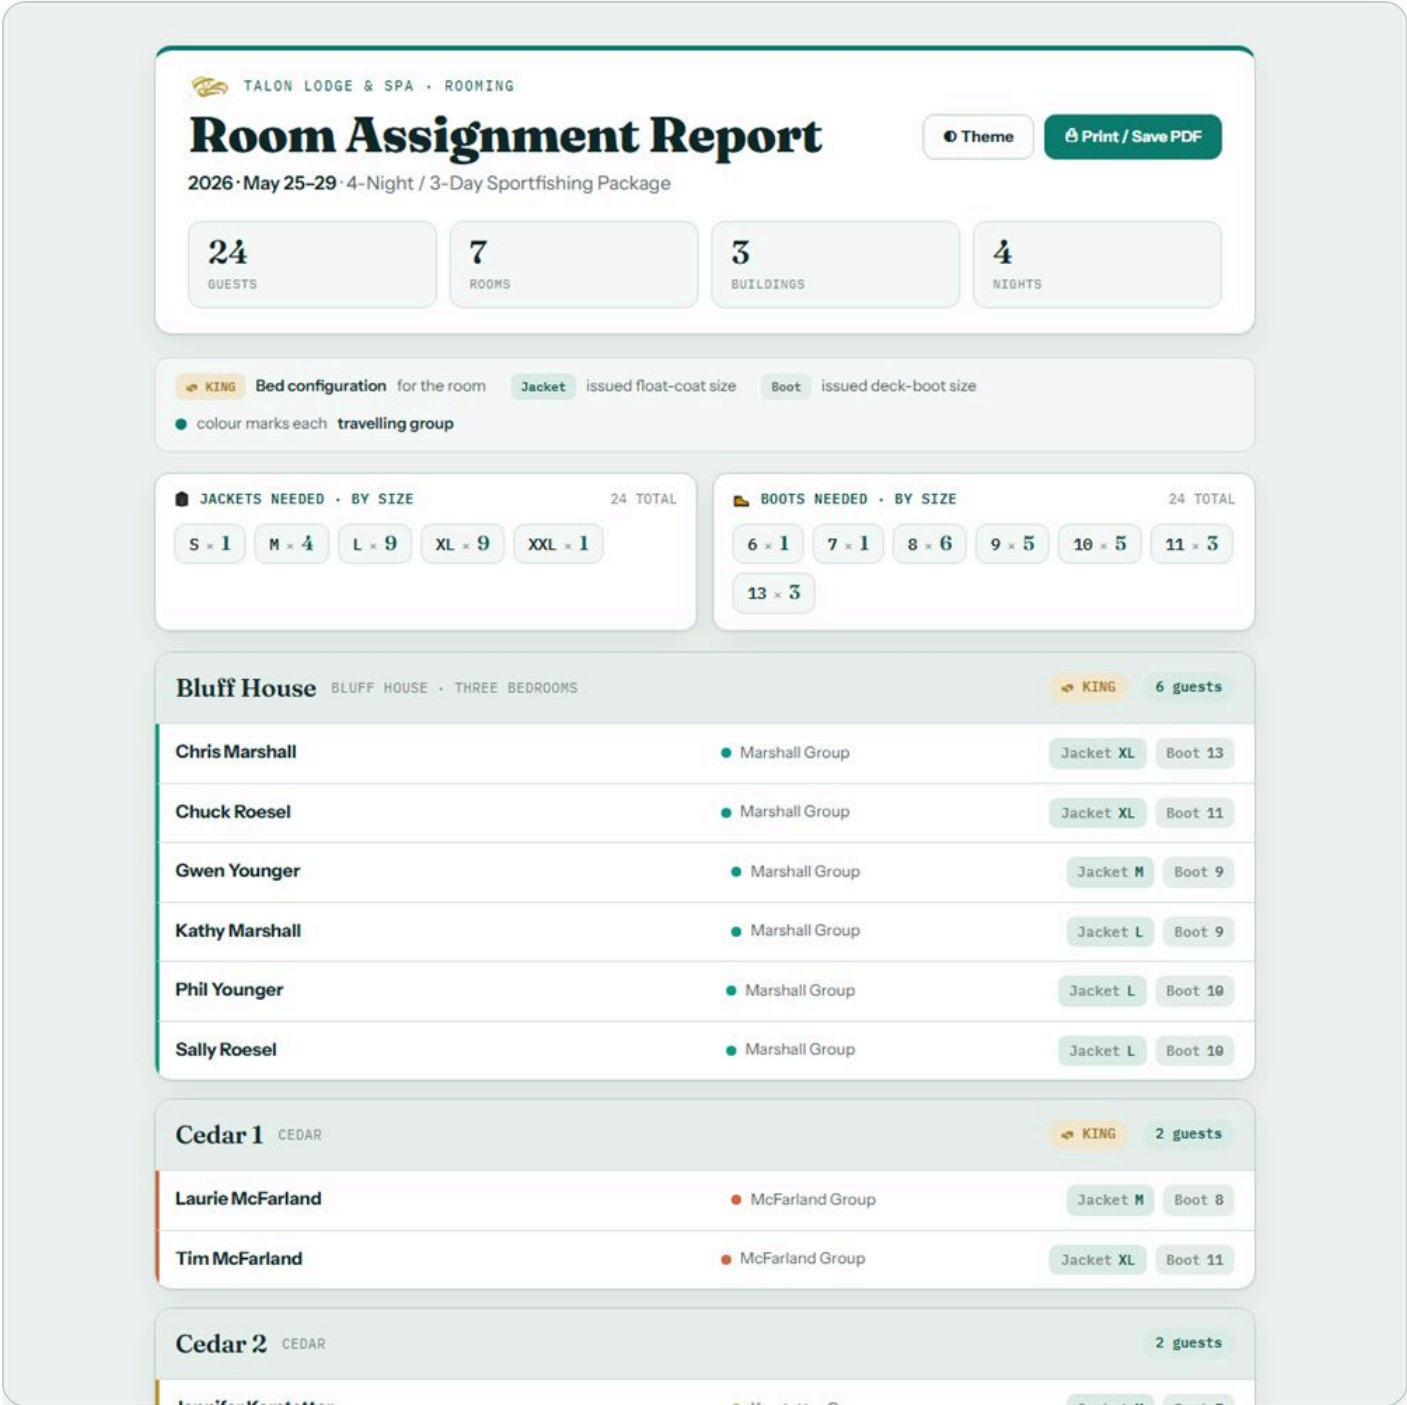

By choosing FedEx you accept this risk. **Talon Lodge & Spa will not absorb or be liable for this risk, and neither will the fish processing company.** We recommend traveling with your catch when you can.

☐

I have read and accept this risk, and release Talon Lodge and the processing company from liability for FedEx shipment.

Guest Confirmations (portal). The assigned guest confirms their charges and their fish handling — take-home or FedEx with the required disclaimer shown here.

Rooming & transfer day

Room Assignment report. Guests by room with jacket/boot sizes, group colour cues, bed config, and a gear-needed tally. Counts generate from the guest records.

Where the production system gets built

The prototypes are the behavioral source of truth. The production build is a conventional three-tier app, split for team access.

BUILD

stellainternational/talon-app2026-ui

Angular 20 + Material (Daxa theme) — staff console & guest portal.

BUILD

stellainternational/talon-app2026-api

Laravel on Aurora MySQL — models, availability engine, data-import migration.

MASTER DOCS

pyounger/talon-lodge-design

These prototypes, reports, schema docs and matching/merge rules — the blueprint.

DATABASE

Aurora MySQL 8 · soft-delete everywhere · no hard deletes

BACK END

Laravel (PHP 8.2+) · the data-import migration lives here

FRONT END

Angular 20 + Material · Daxa theme · rebrand via Sass

SERVICES

S3 storage · **SES** magic-link · **Stripe** billing · multi-site

Open decisions & next steps

- 1 **Finalize rates.** Real spa-treatment prices (Denali Deep, Aurora Refresher, Sitka Swedish + base 50-min), activity rates, alcohol, and the fish-processing fee — so folio totals are live, not indicative.
- 2 **Billing granularity.** Does checkout bill **per guest** or **per group** (lead settles)? And do we add a **tax/fee line** (Sitka) to the total?
- 3 **Embed the tools in the portal** and expose the lead tools at the front desk — so "in the portal" and "at check-in" are the same tool in two places.
- 4 **One shared record.** Wire the lead's choices to drive each guest's confirmations and the billing folios from one dataset (proven in the shared demo; the production DB closes it).
- 5 **Extend Fish Processing** to assign per-share cost responsibility and to consume each guest's take / FedEx choice for the processor and shipping list.
- 6 **Begin the Angular / Laravel port** — stand up the schema, the assignment scheduler, and the guest-portal magic-link; the prototypes are the behavioral spec.

WHERE TO REVIEW THE LIVE VERSIONS

Every report and tool in this document is also a live, interactive page (private links), and each carries a print PDF in the [talon-lodge-design](#) repo. The **shared demo** shows the payment → confirmation → billing flow updating live from one dataset.
